What this record is

Figures read from one database at the data cutoff below, by the build named below. Each entry carries the date and time it was recorded, the name the person doing it selected in the app, and the position the vial was in at the time.

What it is not

Names are selected, not authenticated — this app does not verify who is holding the tablet. Nothing here is a certification against any standard, and nothing here prevents this file being altered after it leaves the tablet.
